

INTRODUCTION

PROJECT: “Automated Employee Onboarding & Offboarding System”

The Automated Employee Onboarding and Offboarding System is a ServiceNow-based application developed to automate and simplify employee joining and exit processes within an organization. In many organizations, onboarding and offboarding activities are handled manually, which can result in delays, errors, lack of coordination, and security issues.

This system provides a centralized platform for managing employee lifecycle activities such as employee registration, account creation, role and access provisioning, asset allocation, notifications, approvals, account deactivation, and asset recovery. By automating these tasks, the system ensures that all required activities are completed accurately and on time.

The application uses ServiceNow forms, workflows, approvals, and notifications to coordinate activities among departments such as Human Resources (HR), Information Technology (IT), and Administration. It improves operational efficiency, reduces manual effort, enhances security and compliance, and provides a smooth and standardized experience for both newly joined and departing employees.

IDEATION PHASE

PROBLEM STATEMENT:

Organizations often face difficulties in managing employee onboarding and offboarding processes manually. Tasks such as creating user accounts, assigning assets, providing system access, collecting company resources, and updating employee records are usually handled through emails and spreadsheets. This manual approach leads to delays, errors, lack of coordination between departments, and security risks.

During onboarding, new employees may not receive the necessary resources and access on time, reducing their productivity and creating a poor employee experience. During offboarding, failure to revoke access rights and recover company assets can result in data security issues and compliance problems.

To overcome these challenges, an Automated Employee Onboarding and Offboarding System is required. The system automates task creation, approvals, notifications, access management, and asset tracking, ensuring a smooth, efficient, and secure employee lifecycle management process.

What are challenges faced without Automated Employee Onboarding & Offboarding System

- Manual and Time-Consuming Processes
- Human Errors and Data Inconsistency
- Poor Coordination Between Departments
- Security and Compliance Risks
- Poor Employee Experience and Reduced Productivity

OBJECTIVE:

To automate and simplify employee onboarding and offboarding processes by reducing manual work, minimizing errors, improving efficiency, ensuring secure access management, and providing a smooth employee experience.

REQUIREMENT ANALYSIS

SOLUTION REQUIREMENT:

TEAM ID	SWTID-2026-1060
PROJECT NAME	Automated Employee Onboarding & Offboarding System

Functional Requirements:

Following are the functional requirements

FR No	Functional Requirement	Sub Requirements
FR-1	Requirement Analysis & Planning	Business Objectives Functional Scope Stakeholder Mapping Execution Roadmap
FR-2	Backend Development & Configurations	Data Architecture Automation Logic Business Rules
FR-3	UI/UX Development & Customization	Interface Design Navigation Flow Usability
FR-4	Data Migration, Testing & Security	Data Handling Access Control QA Testing Data Integrity
FR-5	Deployment, Documentation & Final Presentation	Troubleshooting Adherence to Timelines Innovation Document Functional Overview Document Technical Blueprint Document Setup Manual

		Project Demo Video Planning Visual Demonstration Explanation Clarit Scalability & Future Plan
--	--	--

Non-Functional Requirements:

Following are the functional requirement

NFR No	Non-Functional Requirement	Description
NFR-1	Usability	Easy navigation, user-friendly interface, simple forms, minimal training required
NFR-2	Security	User authentication, role-based access control (RBAC), data encryption, secure employee information handling
NFR-3	Reliability	Accurate workflow execution, data integrity, error handling, system stability
NFR-4	Performance	Fast response time, efficient workflow processing, support for multiple users, quick task execution
NFR-5	Availability	24/7 accessibility, minimal downtime, continuous service availability, backup and recovery support

NFR-6	Scalability	Support for increasing employees and departments, handling large data volumes, ability to expand workflows and features
-------	-------------	---

DATA FLOW DIAGRAM(DFD)

Data Flow Diagram (DFD) for an Automated Employee Onboarding and Offboarding System is a graphical representation that illustrates how employee information moves through the system. It shows the flow of data between users (HR, Manager, Employee), system processes, databases, and external systems during the onboarding and offboarding lifecycle.

Uses

- Shows the flow of employee data during onboarding and offboarding.
- Identifies system processes, data stores, and external entities.
- Improves system analysis and design.
- Ensures secure and efficient management of employee lifecycle data.

Automated Employee Onboarding and Offboarding System Data Flow Diagram (DFD)

Architecture of ServiceNow

- Users access the Automated Employee Onboarding and Offboarding System through the Service Portal.
- The Service Portal sends user requests to the ServiceNow Application.
- Employee details, onboarding/offboarding information, and asset details are stored in Custom Tables.
- Business Rules, Flow Designer, and UI Actions process requests, approvals, and required actions.
- Notifications and Scheduled Jobs automatically send email alerts, task assignments, and reminders.
- Reports and Dashboards monitor the onboarding and offboarding processes.
- Finally, the Service Portal displays the request status, approval status, and completion details to the user.

Project Design:

Proposed Solution:

Project team shall fill the following information in the proposed solution template

S. NO	Parameter	Description
1	Problem statement (problem to be solved)	Organizations face delays, human errors, lack of coordination between departments, and security issues due to manual employee onboarding and offboarding processes.
2	Idea / Solution Description	The Automated Employee Onboarding and Offboarding System is a ServiceNow-based automated solution that streamlines employee joining and exit processes, making them faster, more accurate, and efficient.
3	Novelty / Uniqueness	The system simplifies the entire employee lifecycle through Workflow Automation, Auto Approvals, Notifications, and Task Automation.
4	Social Impact / Customer Satisfaction	The system improves employee experience, reduces administrative workload, increases data accuracy, and enhances organizational efficiency
5	Business Model (Revenue Model)	The system follows a Software-as-a-Service (SaaS) model, where organizations can use the platform through monthly or annual subscription plans.

Automated Employee Onboarding & Offboarding system

What is Automated Employee Onboarding & Offboarding system

Employee Onboarding & Offboarding System is a software solution that automates the process of joining (onboarding) and leaving (offboarding) an organization. It helps HR, IT, Admin, and other departments complete all required tasks quickly, accurately, and securely through automated workflows.

Types:

- **Employee Onboarding:** Adding new employees by creating accounts, assigning roles, providing system access, and allocating assets.
- **Employee Offboarding:** Removing employees by deactivating accounts, revoking access, and collecting company assets.

- **Internal Employee Transfer:** Updating roles and access when employees move between departments or positions.
- **Role Change (Promotion / Demotion):** Modifying employee roles, permissions, and system access based on job cha

Automated Employee Onboarding &Offboarding System

Phase 1: Requirement Analysis & Planning

Gather client needs, define clear goals, and plan the project scope, timeline, and resources.

Business Objectives:

Streamline Employee Lifecycle Management

Digitize and automate onboarding/offboarding processes through ServiceNow to reduce Manual work, ensure consistency, and improve employee experience.

Enhance HR and Manager Efficiency

Provide HR and managers with self-service catalog items and automated workflows to Speed up approvals, task assignments, and lifecycle tracking.

Ensure Secure Role-Based Access

Implement role-based ACLs so HR, IT, Facilities, and Security teams can only access and Act on relevant tasks, ensuring data confidentiality and compliance.

Enable Data-Driven HR Decisions

Use dashboards and reports to analyze onboarding timelines, task completion rates, and SLA adherence, providing insights for process improvements.

Support Organizational Compliance & Sustainability

Maintain audit trails for approvals, automate access revocations during offboarding, and Reduce paperwork by shifting to digital processes

Functional Scope

The Employee Onboarding & Offboarding system in ServiceNow covers the complete employee lifecycle by automating request intake, approvals, and departmental task assignments. The scope includes Service Catalog items for onboarding and offboarding, dynamic variable handling, and Flow Designer workflows to trigger approvals and fulfillment tasks for HR, IT, Facilities, and Security. Role-based ACLs ensure that each stakeholder can only access their respective responsibilities, while dashboards and reports provide visibility into request status, SLA tracking, and overall process efficiency.

Stakeholder Mapping

HR Managers, IT, Facilities, and Security teams collaborate through ServiceNow, each handling their specific onboarding/offboarding responsibilities. Role-based access ensures stakeholders only view and act on tasks relevant, to their function.

Execution Roadmap

The implementation roadmap is divided into structured milestones covering catalog creation, table setup, flow designer automation, SLA configuration, testing, and deployment

Phase2:Backend Development & Configuration

Milestone1:Data Architecture

- Log in to the ServiceNow instance using the Admin role.
- In the Application Navigator, type Tables in the search/filter box.
- Under System Definition, select Tables to create and manage database tables.

Create a New Table

- On the Tables list page, click the New button in the top-right corner.

- The Table – New Record form will open.

Enter Table Details

- Fill in the following information:
 - Label: Employee Lifecycle2
 - Name: u_employee_lifecycle2 (automatically generated from the Label)
 - Extends Table: Leave blank
 - Application: Global (Default)
 - Create Module: Unchecked
 - Add Module to Menu: Create New
 - New Menu Name: Employee Lifecycle2
 - Click on submit button
-
- Verify Table Creation
 - After clicking Submit, you will be redirected to the Tables list.
 - In the search box, enter Employee Lifecycle2 to find the newly created table.
 - Verify that the u_employee_lifecycle2 table appears in the list with the latest Updated date.

Add Columns to the Table

- Click on Employee Lifecycle2 label to open the table record.
- Scroll down to the Table Columns related list.
- Click the New button to add columns.
- Add Columns One by One
- Create each column separately by clicking New every time:
- 1. Employee ID
- Column Label: Employee ID
- Type: String
- Max Length: 40
- Mandatory: (check if required)
- Click Submit
- Again new click add the remaining columns one by one

ServiceNow Developer Interface: Table - Employee Lifecycle2

Table Name: Application: Global

Table Name: Remote Table:

Columns | Controls | Application Access

Table Columns: for text Search 1 to 10 of 10 New

Dictionary Entries

Column label	Type	Reference	Max length	Default value	Display
Employee Id	String	(empty)	40	40	false
Department	Choice	(empty)	40	40	false
Created by	String	(empty)	40	40	false

- 2. Department
- Type: Choice
- Click Submit
- 3. Status
- Type: Choice
- Click Submit
- 4. Date
- Type: Date/Date Time
- Click on submit
- Save the table verify the all columns are created successfully in the table columns list

The screenshot shows the ServiceNow developer interface for the 'Employee Lifecycle2' table. The 'Columns' tab is active, displaying a list of columns. The 'Status' column is highlighted with a red 'X' in the first column, indicating it is selected for configuration. The 'Type' for 'Status' is set to 'Choice'. The 'Reference' is '(empty)', 'Max length' is '40', and 'Default value' is '(empty)'. The 'Display' column is 'false'.

Column label	Type	Reference	Max length	Default value	Display
Employee Id	String	(empty)	40		false
Department	Choice	(empty)	40		false
Created by	String	(empty)	40		false
Sys ID	Sys ID (GUID)	(empty)	32		false
Created	Date/Time	(empty)	40		false
Updates	Integer	(empty)	40		false
Status	Choice	(empty)	40		false
Date	Date/Time	(empty)	40		false
Updated by	String	(empty)	40		false
Updated	Date/Time	(empty)	40		false

Configure the Status Field

- Open the Status column.
- Set the Type as Choice.
- Click Submit to save the field.
- Add Choice Values
- Reopen the Status field and go to the Choices related list.
- Click New to add each choice value separately.
- Add the following options:
- Onboarding
- In Progress
- Completed
- Offboarding
- Click Submit after adding each choice
- Verified that the Status field displayed all the added options in the drop-down List.

Mailstone2: Automation Logic

- Login to the servicenow developer account
- In the Application Navigator, search for system definitions> tables

- Click on new button open new form
- Entered the following details:
- Flow Name: Employee Onboarding
- Application: Global
- Description: Automated onboarding and offboarding process.
- Clicked Submit (or Create) to create the flow.

Let's get the details for your flow

Flow name *

Application *

Description

> Show additional properties

Click add Trigger.

- Select Created as the trigger condition.
- Chose the Employee Lifecycle table.
- Clicked Done to save the trigger.
- Clicked Add Action (+).
- Added the required actions one by one, such as:
- Ask for Approval (Manager Approval)

- Create the HR Task
- After Create the IT Task
- Create Facilities Task
- Send Email Notification
- Configured each action with the required fields.
- Connected all the actions in the correct sequence.
- Click save
- Created a test record in the Employee Lifecycle table
- Verified the flow was triggered automatically, approvals were generated through tasks
- notifications were sent successfully

Milestone3: Business rules

Step 1: Navigate to Business Rules Module

- Log in to ServiceNow with Admin role
- In the Filter Navigator, type `Business Rules`
- Under `System Definition`, click `Business Rules`

Step 2: Open New Business Rule Form*

- On the Business Rules list page, click the `New` button

Step 3: Configure Basic Information

- Name*: Enter `close RITM when all tasks complete`
- Table*: Select `Catalog Item[sc-item]`
- Application*: Keep as `Global`
- Active*: Keep checked
- Advanced*: Check the `Advanced` check

A business rule is a server-side script that runs when a record is displayed, inserted, deleted, or when a table is queried. Use business rules to automatically change values in form fields when the specified conditions are met. [More Info](#)

Name: Close RITM when all tasks complete
Table: Catalog Task [sc.task]

Application: Global
Active: ☒
Advanced: ☒

When to run: after
Order: 100

Filter Conditions: Add Filter Condition Add OR Clause
State changes to Closed Complete

Role conditions: [Add](#)

Insert: ☒
Update: ☒
Delete: ☐
Query: ☐

Step 4: Set When to Run Conditions*

- Click the `When to run` tab
- When*: Select `After` from the dropdown
- Order*: Keep as `100`
- Check the `Update` checkbox
- Filter Conditions*: Click `Add Filter Condition` and set `Status` `is` `Completed`

Step 5: Define Actions*

- Click the `Actions` tab
- Check `Set field values`
- Field: Select `Status`

- To: Select `Completed`

Step 6: Save the Business Rule*

- Click the `Submit` button at the top right.

Phase3:UI/UX Development & Customization

Milestone4: Interface Design

- Log in to the ServiceNow Developer Instance.
- In the Application Navigator, searched for Tables.
- Opened System Definition → Tables.
- Opened the Employee Lifecycle table.
- Right-clicked the form header and selected Configure → Form Designer.

The Form Designer page opened.

- Arranged the fields in the required order.
- Added a New Section to organize the form layout.
- Selected the Column layout for the section.

Milestone5: Navigation Flow

Login to ServiceNow PDI

- Copy the Instance domain ex: <https://dev409325.service-now.com>.
- Paste the URL in the Next tab and add Prefix SP to the URL.

Ex: <https://dev409325.service-now.com/sp>.

- Search for Network Requests.

- Click on AWC account request
- Fill the required details and click on submit
- New Requests will be generated with request numbers and users will get
- Particular emails on the same.

- Fill the details

- After click on submit button

dev413887.service-now.com/sp?id=sc_request&is_new_order&table=sc_request&sys_id=5447239653758310efa95eb0a0490ee2

servicenow

Home > Service Catalog > Software > AWS account request

Search Catalog

Use this form to submit request for new amazon web services (AWS) account

* Indicates required

* Division
IT

* Environment
Dev

* Describe the purpose of this account briefly
Required for employee project environment testing.

Request Summary - REQ0010003

dev409325.service-now.com/sp?id=sc_request&is_new_order&table=sc_request&sys_id=98bdc61683b54390f53f9796feaad364

servicenow

Home > Request Summary - REQ0010003

Search Catalog

Submitted : 2026-07-02 20:47:11
Request Number : REQ0010003
Estimated Delivery : --

Item	Delivery Date	Stage	Price (each)	Quantity	Total
AWS account request	--	Waiting for Approval	--	--	--

Total: \$0.00

Milestone6:Usability

- Log in to the ServiceNow Developer Instance.
- Opened Service Catalog → Catalog UI Policies.
- Clicked New.

Entered the required details:

- Name:Employee Lifecycle [u-employee-lifecycle
- Short Description:show on boarding fields
- Active (checked if required)
- Configured the required Condition.

The screenshot shows the ServiceNow UI Policy configuration interface. The top navigation bar includes 'All', 'Favorites', 'History', 'Workspaces', and 'Admin'. The main header is 'UI Policy - Show Onboarding Fields'. Below this, there's a 'More Info' link and a 'Table' dropdown set to 'Employee Lifecycle [u-employee-lifecycle]'. The 'Application' is set to 'Global' and the 'Active' checkbox is checked. The 'Short description' is 'Show Onboarding Fields'. Under the 'When to Apply' section, the condition is configured as 'Request Type' is 'Onboarding'. Below this, there are 'Update' and 'Delete' buttons. The 'Related Links' section includes 'Advanced view' and 'Run Point Scan'. The 'UI Policy Actions (4)' section shows a table of actions for the policy.

Field name	Mandatory	Visible	Read only
u_end_date	Leave alone	False	Leave alone
u_start_date	True	True	Leave alone
u_manager	True	True	Leave alone
u_status	Leave alone	False	Leave alone

- Click on update

Click on New.

- Name:Employee Lifecycle [u-employee-lifecycle]
- Short Description:show offboarding fields
- Active (checked if required)
- Configured the required Condition.

- Click on new button

The screenshot shows the ServiceNow web interface for the 'Employee Onboarding and Offboarding' catalog item. The breadcrumb trail is 'Service Catalog > Office > Services > Employee Onboarding and Offboarding'. The form title is 'Employee Onboarding and Offboarding Request form'. It contains the following fields:

- * Request type:** A dropdown menu with 'Off boarding' selected.
- Employee ID:** A text input field with a blue highlight and a cursor.
- Exit Date:** A date picker field.
- Asset Collection:** A large empty text area.
- Access Revocation Required:** A checkbox that is currently unchecked.

The browser's address bar shows a URL starting with 'https://dev187267.service-now.com/now/nav/ui/classic/params/target/com.glideapp.servicecatalog_cat_item_view.do%3Fv%3D17%26sysparm_id%3D3d49fec3798150c3e696f654013116'. The ServiceNow logo and navigation tabs (All, Favorites, History, Workspaces, Admin) are visible at the top.

Clicked Update to save the Catalog UI Policy.

- Opened the Employee Onboarding catalog item.
- . Tested the form and verified that the fields were displayed or hidden.
- Based on the selected option.

Phase 4: Data Migration, Testing & Security

Milestone 7: Data Handling

- Login to the ServiceNow Developer Instance.
- Open Workflow Studio from the Application Navigator.
- Search for system definition>tables

- When open new from
- Click on new button

- Added the Service Catalog Trigger.
- Configured the trigger for the Employee Onboarding & Offboarding Catalog item.
- Clicked + Add Action.
- Added the Look Up Records action to retrieve employee information.
- Configured the required table and conditions.
- Clicked Done.
- Clicked + Add Action again.
- Added the Create Record action.
- Selected the Employee Lifecycle table.
- Mapped the catalog variables to the table fields (Employee ID, Department, Status, etc.).
- Clicked Done.

Milestone8:Access Control

- Login to the ServiceNow Developer Instance.
- Opened System Security → Access Control (ACL) from the Application Navigator

- Clicked on the Profile icon in the top-right corner.
- Selected Elevate Roles from the profile menu.
- In the Elevate Roles window, checked the security_admin checkbox.
- Clicked Update to activate the security_admin role.

- Returned to the Access Control (ACL) module.
- Opened the required ACL record for the Employee Lifecycle table.
- Verified the Read, Write, Create, and Delete permissions.
- Saved the ACL configuration by clicking Update.
- Tested the access to ensure only authorized users could access the Employee Lifecycle table

The screenshot shows the ServiceNow 'Access Controls' list. The table contains the following data:

Name	Decision Type	Operation	Type	Active	Updated by	Updated
\$allappsmgmt	Allow If	read	ui_page	true	admin	2019-02-20 01:02:07
\$atf_page_inspector	Allow If	read	ui_page	true	admin	2020-03-20 15:16:15
\$conversation-builder	Allow If	read	ui_page	true	admin	2019-06-14 15:13:38
\$mycompanyappsmgmt	Allow If	read	ui_page	true	admin	2019-02-21 02:31:44

\$spm_availability_calculation_setting	Allow If	read	ui_page	true	admin	2024-02-18 06:04:39
\$studio	Allow If	read	ui_page	true	admin	2016-01-09 16:21:38
\$upgrade_client	Allow If	read	ui_page	true	admin	2025-11-10 16:44:04

Milestone9:QA Testing

- In Filter Navigator, search for `Maintain Items` and open it

- Open the `Onboarding or Offboarding` item from the list

Click on new button

- Go to the `Variables` tab and click on the `Select Request Type` Variable
- Scroll down to the `Question Choices` related list and click the *New* button

New form will be open fill the form details Click on Submit

The screenshot shows the ServiceNow Variable - Department form. The form includes the following fields and values:

- Application: Global
- Type: Select Box
- Catalog Item: Onboarding or Offboarding
- Order:
- Active: ☒
- Mandatory: ☐
- Read only: ☐
- Hidden: ☐
- Disable automatic slot fill based on user context: ☐
- Question: Department
- Name: department

- Request has been submitted` message appears with a *REQ

Number* generated

The screenshot shows a web browser window with multiple tabs. The active tab is 'Order Status: REQ0010005'. The URL is 'dev409325.service-now.com/now/nav/ui/classic/params/target/com.glideapp.servicecatalog_checkout_view_v2.do%3Fv%3D1%26sysparm_sys_id%3D5749768b83b1c790f53f9796fead385%26syspa...'. The page header includes the ServiceNow logo and navigation links. The main content area shows the order status 'Order Status: REQ0010005' with a search bar. Below this, a green notification bar states 'Thank you, your request has been submitted'. The order details are as follows:

Description	Delivery Date	Stage	Price (ea.)	Quantity	Total
submit request for new hire or exit	2026-07-07	▶ ● ○ ○ ○		1	
					Total

Buttons at the bottom include 'Back to Catalog', 'Continue Shopping', and 'Home'. The Windows taskbar at the bottom shows the search bar, taskbar icons, and system tray with weather (28°C Cloudy) and time (3:55 PM 7/5/2026).

Milestone10:Data Integrity

Login to the ServiceNow developer instance

- In Navigation Search `u\_employee\_lifecycle2` in filter navigator.

Click on new button

The screenshot shows the 'Employee lifecycle2 - Create Created' form in the ServiceNow interface. The page header includes the ServiceNow logo and navigation links. The main content area shows the form with the following fields:

- Status: -- None --
- Employee ID: [Text Field]
- Date: [Calendar Icon]

A 'Submit' button is visible at the bottom left of the form area. The Windows taskbar at the bottom shows the search bar, taskbar icons, and system tray with weather (28°C Cloudy) and time (02:37 PM 01-07-2026).

Open `Employee lifecycle2s` module from results.

- Check table columns: Date, Department, Employee ID, Status.
- Click “New” button to create record.

- After click on save button then save the flow design

Phase 5: Deployment, Documentation & Final Presentation

Troubleshooting

- **Flow Execution logs:** Used flow Designer's Execution Details to trace Onboarding/offboarding flow steps, validate approvals, and check Notifications.
- **Email Logs:** Verified notifications in System Logs → Email → Sent/Received for manager approvals, task assignments, and clouser updates
- **Variable Population Issues:** Resolved missing or incorrect field Mappings by debugging variable sets and adjusting catalog client Scripts.
- **Form behavior testing:** Ensured UI policies dynamically show/hide Joining Date or Exit Date fields in Service Portal forms.

Adherence to Timelines

- Executed the project as per the 5-phase roadmap:
- Roles & Security Setup
- Employee Lifecycle Table & Fields
- Catalog Items & UI Policies
- Flow Designer Automation + Testing & Security
- Deployment & Documentation

Innovation

- Built Complete automation using Flow Designer (no Business Rules or Script Includes).
- Implemented dynamic approvals (manager-driven) and automatic task creation (HR, IT, Facilities, Security).
- Minimized use of client scripts/UI policies to only essential scenarios, ensuring maintainability and easier admin handoff.

Document Functional Overview

- **Variables:** Request type, Employee ID, Department, Joining/Exit Date, Manager, Assets, Access details.
- **Approval use cases:** Manager approval for all requests; departmental tasks auto-assigned.
- **Lifecycle Tracking:** Employee Lifecycle table stores request details with status updates.

Document Technical Blueprint

Included:

- Flow Designer workflow screenshots with explanations.
- Variable-to-field mapping logic (catalog → Employee Lifecycle table).
- Custom table schema (u_employee_lifecycle).
- Approval routing conditions in Flow steps.
- SLA configurations tied to IT/Facilities/Security tasks.

Document Setup Manual

- Step-by-step guide for replicating solution in a new PDI:
- Catalog item creation (Onboard / Offboard Employee).
- Variable configuration with UI policies.
- Flow Designer workflows
- Role & ACL configuration.
- Test request submissions.
- Screenshots and sequence of execution steps included.

Project Demo Video Planning

Demo includes:

- Portal walkthrough: Service Catalog → HR Services → Onboard/Offboard Employee.
- Live request submission with approvals.
- Task creation and SLA monitoring.
- Notifications to employees & managers.
- Request closure lifecycle shown from start to completion.

Visual Demonstratio

Visual Demonstratio

Captured and annotated

- Portal forms with dynamic variables
- Approval records in activity timeline
- Email notifications received by approvers
- FlowDesigner execution logs confirming process.

Explanation Clarit

- Documentation and presentation structured as What → Why → How → Outcome.
- Each stage backed with screenshots, labeled flows, and explanatory notes for replicability

Scalability & Future Plan

- Auto-provisioning via integration with Active Directory / HR tools.
- Use of Integration Hub for external system handoffs (e.g., asset management).
- Reporting dashboards for request volume and SLA compliance.

- Expansion to related HR services like Leave Requests or Transfer Requests.

Advantages and Disadvantages

ADVANTAGES

- Improves employee onboarding and offboarding efficiency through workflow automation.
- Reduces paperwork and repetitive manual tasks.
- Ensures faster approval and task completion with automated workflows.
- Increases data accuracy and minimizes human errors.
- Strengthens security with role-based access control (RBAC) and audit tracking.
- Enhances collaboration between HR, IT, and Administration departments.
- Provides real-time status tracking, notifications, and better process visibility.
- Improves employee experience with a streamlined and user-friendly process.

DISADVANTAGES

- Initial configuration and workflow setup require time and technical expertise.
- Depends on a stable internet connection and ServiceNow platform availability.
- Users require training to understand and use the system effectively.
- Customizing workflows for different organizations may increase implementation effort.
- System maintenance and periodic updates are required for smooth operation.
- Integration with external HR or IT systems may require additional development.

Conclusion

The Automated Employee Onboarding and Offboarding System developed using ServiceNow successfully automates the employee lifecycle by replacing manual processes with efficient digital workflows. The system simplifies onboarding and offboarding activities

through automated approvals, task assignments, notifications, and status tracking, reducing manual effort and improving overall productivity.

The implementation of Role-Based Access Control (RBAC) enhances data security, while the user-friendly interface improves usability for HR, managers, and employees. Testing confirmed that all workflows and system functionalities operate as expected. Overall, the project delivers a secure, reliable, and scalable solution that improves operational efficiency and can be extended with additional HR and IT integrations in the future.
